0x15. API

Python

Scripting

Back-end

API

 By: Sylvain Kalache, co-founder at Holberton School Weight: 1 Project over - took place from Sep 25, 2023 6:00 AM to Sep 26, 2023 6:00 AM☒ An auto review will be launched at the deadline

In a nutshell...

- **Auto QA review:** 21.0/21 mandatory
- **Altogether: 100.0%**
 - Mandatory: 100.0%
 - Optional: no optional tasks

Concepts

For this project, we expect you to look at this concept:

- Portfolio Project Deeper Overview (/concepts/102042)

Background Context

(<https://youtu.be/-2kyU6-j8ZQ>)

Old-school system administrators usually only know Bash and that is what they use to build their scripts. While Bash is perfectly fine for a lot of things, it can quickly get messy and not efficient compared to other programming languages. The new generation of system administrators, usually called SREs, are pretty much regular software engineers but instead of building products, they are managing systems. And one of the big differences with their predecessors is that they know more than just Bash scripting.

One popular way to expose an application and dataset is to use an API. Often, they are the public facing part of websites and micro-services so that allow outsiders to interact with them – access and modify their data. In this project, you will access employee data via an API to organize and export them to different data structures.

This is a perfect example of a task that is not suited for Bash scripting, so let's build Python scripts.

Resources

Read or watch:

- Friends don't let friends program in shell script (/rltoken/KMFzqRAqedMf7AHHBD_43g)
- What is an API (/rltoken/zeBO6_RNTIwaotyRRNAzoQ)
- What is an API? In English, please (/rltoken/bf09Qp6QY44CANLzxxRbPA)
- What is a REST API (/rltoken/fA164QWEnZxaSngBD3EPRQ)
- What are microservices (/rltoken/n4h77IbBuDxTE3bhes_AyQ)
- PEP8 Python style - having a clean code respecting style guide is really appreciated in the industry (/rltoken/b7V1ROY6kSRxDDKnsJoqyg)

Learning Objectives

At the end of this project, you are expected to be able to explain to anyone (/rltoken/03Evn5VslCwJUAItdU0zHA), **without the help of Google**:

General

- What Bash scripting should not be used for
- What is an API
- What is a REST API
- What are microservices
- What is the CSV format
- What is the JSON format
- Pythonic Package and module name style
- Pythonic Class name style
- Pythonic Variable name style
- Pythonic Function name style
- Pythonic Constant name style
- Significance of CapWords or CamelCase in Python

Copyright - Plagiarism

- You are tasked to come up with solutions for the tasks below yourself to meet with the above learning objectives.
- You will not be able to meet the objectives of this or any following project by copying and pasting someone else's work.
- You are not allowed to publish any content of this project.
- Any form of plagiarism is strictly forbidden and will result in removal from the program.

Requirements

General

- Allowed editors: `vi`, `vim`, `emacs`
- All your files will be interpreted/compiled on Ubuntu 20.04 LTS using python3 (version 3.8.5)
- All your files should end with a new line
- The first line of all your files should be exactly `#!/usr/bin/python3`
- **Libraries imported in your Python files must be organized in alphabetical order**
- A `README.md` file, at the root of the folder of the project, is mandatory
- Your code should use the pycodestyle (version `2.8.*`)
- All your files must be executable
- The length of your files will be tested using `wc`
- All your modules should have a documentation (`python3 -c 'print(__import__("my_module").__doc__)'`)
- You must use `get (/rltoken/CNqOWPW6mdYuK7Ak-f2KHQ)` to access to dictionary value by key (it won't throw an exception if the key doesn't exist in the dictionary)
- Your code should not be executed when imported (by using `if __name__ == "__main__":`)

Tasks

0. Gather data from an API

mandatory

Score: 100.0% (Checks completed: 100.0%)

Write a Python script that, using this REST API (`/rltoken/7cr7aLYdaWAZWBKrBKS12A`), for a given employee ID, returns information about his/her TODO list progress.

Requirements:

- You must use `urllib` or `requests` module
- The script must accept an integer as a parameter, which is the employee ID
- The script must display on the standard output the employee TODO list progress in this exact format:
 - First line: `Employee EMPLOYEE_NAME is done with`
`tasks(NUMBER_OF_DONE_TASKS/TOTAL_NUMBER_OF_TASKS):`
 - `EMPLOYEE_NAME` : name of the employee
 - `NUMBER_OF_DONE_TASKS` : number of completed tasks
 - `TOTAL_NUMBER_OF_TASKS` : total number of tasks, which is the sum of completed and non-completed tasks
 - Second and N next lines display the title of completed tasks: `TASK_TITLE` (with 1 tabulation and 1 space before the `TASK_TITLE`)

Example:

```
sylvain@ubuntu$ python3 0-gather_data_from_an_API.py 2
Employee Ervin Howell is done with tasks(8/20):
    distinctio vitae autem nihil ut molestias quo
    voluptas quo tenetur perspiciatis explicabo natus
    aliquam aut quasi
    veritatis pariatur delectus
    nemo perspiciatis repellat ut dolor libero commodi blanditiis omnis
    repellendus veritatis molestias dicta incidunt
    excepturi deleniti adipisci voluptatem et neque optio illum ad
    totam atque quo nesciunt
sylvain@ubuntu$ python3 0-gather_data_from_an_API.py 4
Employee Patricia Lebsack is done with tasks(6/20):
    odit optio omnis qui sunt
    doloremque aut dolores quidem fuga qui nulla
    sint amet quia totam corporis qui exercitationem commodi
    sequi dolorem sed
    eum ipsa maxime ut
    tempore molestias dolores rerum sequi voluptates ipsum consequatur
sylvain@ubuntu$
sylvain@ubuntu$ python3 0-gather_data_from_an_API.py 4 | tr " " "S" | tr "\t" "T"
EmployeeSPatriciaSLebsackSisSdoneSwithStasks(6/20):
TSoditSoptioSomnisSquiSsunt
TSdoloremqueSautSdoloresSquidemSfugaSquiSnulla
TSsintSametSquiaStotamScorporisSquiSexercitationemScommodi
TSsequiSdoloremSsed
TSeumSipsaSmaximeSut
TStemporeSmolestiasSdoloresSrerumSsequiSvoluptatesSipsumSconsequatur
sylvain@ubuntu$
```

QA Review

1. Export to CSV

mandatory

Score: 100.0% (Checks completed: 100.0%)

Using what you did in the task #0, extend your Python script to export data in the CSV format.

**Requirements:**

- Records all tasks that are owned by this employee
- Format must be: "USER_ID", "USERNAME", "TASK_COMPLETED_STATUS", "TASK_TITLE"
- File name must be: USER_ID.csv

Example:

(/)

```
sylvain@ubuntu$ python3 1-export_to_CSV.py 2
sylvain@ubuntu$ cat 2.csv
"2","Antonette","False","suscipit repellat esse quibusdam voluptatem incidunt"
"2","Antonette","True","distinctio vitae autem nihil ut molestias quo"
"2","Antonette","False","et itaque necessitatibus maxime molestiae qui quas velit"
"2","Antonette","False","adipisci non ad dicta qui amet quaerat doloribus ea"
"2","Antonette","True","voluptas quo tenetur perspiciatis explicabo natus"
"2","Antonette","True","aliquam aut quasi"
"2","Antonette","True","veritatis pariatur delectus"
"2","Antonette","False","nesciunt totam sit blanditiis sit"
"2","Antonette","False","laborum aut in quam"
"2","Antonette","True","nemo perspiciatis repellat ut dolor libero commodi blanditii
s omnis"
"2","Antonette","False","repudiandae totam in est sint facere fuga"
"2","Antonette","False","earum doloribus ea doloremque quis"
"2","Antonette","False","sint sit aut vero"
"2","Antonette","False","porro aut necessitatibus eaque distinctio"
"2","Antonette","True","repellendus veritatis molestias dicta incidunt"
"2","Antonette","True","excepturi deleniti adipisci voluptatem et neque optio illum
ad"
"2","Antonette","False","sunt cum tempora"
"2","Antonette","False","totam quia non"
"2","Antonette","False","doloremque quibusdam asperiores libero corrupti illum qui o
mnis"
"2","Antonette","True","totam atque quo nesciunt"
sylvain@ubuntu$
```

QA Review

2. Export to JSON

mandatory

Score: 100.0% (Checks completed: 100.0%)

Using what you did in the task #0, extend your Python script to export data in the JSON format.

Requirements:

- Records all tasks that are owned by this employee
- Format must be: { "USER_ID": [{"task": "TASK_TITLE", "completed": TASK_COMPLETED_STATUS, "username": "USERNAME"}, {"task": "TASK_TITLE", "completed":

```
TASK_COMPLETED_STATUS, "username": "USERNAME"}, ... ]}
```

- (/). File name must be: USER_ID.json

Example:

```
sylvain@ubuntu$ python3 2-export_to_JSON.py 2
sylvain@ubuntu$ cat 2.json
{"2": [{"task": "suscipit repellat esse quibusdam voluptatem incidunt", "completed": false, "username": "Antonette"}, {"task": "distinctio vitae autem nihil ut molestias quo", "completed": true, "username": "Antonette"}, {"task": "et itaque necessitatibus maxime molestiae qui quas velit", "completed": false, "username": "Antonette"}, {"task": "adipisci non ad dicta qui amet quaerat doloribus ea", "completed": false, "username": "Antonette"}, {"task": "voluptas quo tenetur perspiciatis explicabo natus", "completed": true, "username": "Antonette"}, {"task": "aliquam aut quasi", "completed": true, "username": "Antonette"}, {"task": "veritatis pariatur delectus", "completed": true, "username": "Antonette"}, {"task": "nesciunt totam sit blanditiis sit", "completed": false, "username": "Antonette"}, {"task": "laborum aut in quam", "completed": false, "username": "Antonette"}, {"task": "nemo perspiciatis repellat ut dolor libero commodi blanditiis omnis", "completed": true, "username": "Antonette"}, {"task": "repudiandae totam in est sint facere fuga", "completed": false, "username": "Antonette"}, {"task": "earum doloribus ea doloremque quis", "completed": false, "username": "Antonette"}, {"task": "sint sit aut vero", "completed": false, "username": "Antonette"}, {"task": "porro aut necessitatibus eaque distinctio", "completed": false, "username": "Antonette"}, {"task": "repellendus veritatis molestias dicta incidunt", "completed": true, "username": "Antonette"}, {"task": "excepturi deleniti adipisci voluptatem et neque optio illum ad", "completed": true, "username": "Antonette"}, {"task": "sunt cum tempora", "completed": false, "username": "Antonette"}, {"task": "totam quia non", "completed": false, "username": "Antonette"}, {"task": "dolorumque quibusdam asperiores libero corrupti illum qui omnis", "completed": false, "username": "Antonette"}, {"task": "totam atque quo nesciunt", "completed": true, "username": "Antonette"}]}sylvain@ubuntu$
```

Repo:

- GitHub repository: alx-system_engineering-devops
- Directory: 0x15-api
- File: 2-export_to_JSON.py

QA Review

3. Dictionary of list of dictionaries

mandatory

Score: 100.0% (Checks completed: 100.0%)

Using what you did in the task #0, extend your Python script to export data in the JSON format.

Requirements:

- Records all tasks from all employees
- (/). • Format must be:

```
{ "USER_ID": [ {"username": "USERNAME", "task": "TASK_TITLE",  
"completed": TASK_COMPLETED_STATUS}, {"username": "USERNAME", "task": "TASK_TITLE",  
"completed": TASK_COMPLETED_STATUS}, ... ], "USER_ID": [ {"username": "USERNAME",  
"task": "TASK_TITLE", "completed": TASK_COMPLETED_STATUS}, {"username": "USERNAME",  
"task": "TASK_TITLE", "completed": TASK_COMPLETED_STATUS}, ... ]}
```
- File name must be: `todo_all_employees.json`

Example:

```
sylvain@ubuntu$ python3 3-dictionary_of_list_of_dictionaries.py
```

```
sylvain@ubuntu$ cat todo_all_employees.json
```

```
{
  "1": [
